B. Vertical Asymptotes

Remember that the calculator may draw near vertical lines at values where there is a vertical asymptote and limits from the left and right have different signs. Use \texttt{DrawDot} mode or choose a window which has pixels at the asymptote values. You can draw them yourself either using \texttt{GRAPH/DRAW/VERT} or from the home screen, choose \texttt{Vert} from the \texttt{CATALOG}, enter the x-coordinate, and press \texttt{ENTER}. When the \texttt{CATALOG} screen comes up, press \texttt{V} and you will move down to the beginning of the \texttt{V} listings.
